- 22. [Open Questions](#)
- 23. [Milestones & Timeline](#)

1. Overview

The **BAC 2026 App** is a lightweight mobile application designed exclusively for attendees of the **Biotechnology Annual Congress (BAC) 2026**, organised by **ASBTEC** in co-organisation with **FEBIOTEC**, and held at the **Faculty of Biosciences, Universitat Autònoma de Barcelona (UAB)**, from **Tuesday 7 July to Saturday 11 July 2026**

The app centralises all key congress information — schedule, venue map, events, sponsors, and speakers — into a clean five-tab interface. It requires **no authentication of any kind**. The app is fully anonymous and does not collect any user data.

The design is inspired by the **Cambridge Healthtech Institute (CHI) Events App** — a well-regarded conference app in the life sciences industry — adapted to BAC's simpler scope and no-login architecture.

The app is **fully in Spanish**.

2. Goals & Non-Goals

Goals

- Show attendees current and upcoming events in real time (Home).
- Allow browsing all congress events with filtering and search (Events).
- Display a venue map of the UAB campus with congress spaces (Map).
- Allow attendees to save events to a personal schedule stored locally on-device (My Schedule).
- List congress sponsors and speakers (Sponsors & Speakers).
- Be fast, intuitive, and usable offline.
- Be available on the opening day of BAC 2026.

Non-Goals

- No user authentication, accounts, or server-side sessions.
- No integration with the FEBIOTEC website backend or registration/purchase database.
- No use of FEBIOTEC Google Workspace accounts.
- No in-app quiz or interactive activity engine.
- No in-app messaging or real-time networking between attendees.

3. Context & Background

ASBTEC organises the annual BAC (Biotechnology Annual Congress) for biotech students and professionals, in co-organisation with FEBIOTEC — the federation of which ASBTEC is a member association. The initial proposal was a general FEBIOTEC events app, which was scoped down to a BAC-specific app for the following reasons:

- A general FEBIOTEC events app would require connecting to the FEBIOTEC website's user and ticketing database — technically complex and outside the current project budget and timeline.
- FEBIOTEC Google Workspace accounts are restricted to board members and collaborators, and cannot serve as an open authentication layer.
- A BAC-specific app without server-side login delivers the most critical attendee value with significantly lower complexity.

The result is a congress companion app: lightweight, public, and easy to update during the event.

4. Users & Use Cases

Primary Users

Congress attendees — biotech students, researchers, and professionals at BAC 2026. They want to:

- Know in real time what is happening now and what is coming up next.
- Browse the full congress programme and filter by event category and activity type.
- Find which room a session is in and read its description.
- See the venue map and know which events are happening in each space.
- Save events to their personal schedule.
- Discover sponsors and speakers at the congress.

Secondary Users

Congress organisers / ASBTEC Board — they want to:

- Prepare and publish the complete event and exhibitor data before the congress opens.
 - Push data corrections during the congress without requiring users to reinstall.
 - Ensure sponsors and speakers receive clear visibility in the app.
-

5. Tab Summary

Tabs are ordered left to right in the bottom navigation bar:

Position	Tab	Label	Icon	Default
1 (leftmost)	My Schedule	Agenda	Bookmark	No
2	Map	Mapa	Map	No
3 (centre)	Home	Inicio	House	Yes
4	Events	Eventos	Calendar	No
5 (rightmost)	Sponsors & Speakers	Personas	People	No

A **three-dot button** () is permanently visible in the top-right corner across all tabs and opens a global sliding side drawer.

6. Design Reference — CHI Events App

The **Cambridge Healthtech Institute (CHI) Events App** (available on iOS and Android) is the primary UX and visual design reference for this project. It is a leading conference app in the life sciences sector, recognised for its clean navigation and agenda experience.

Key patterns adopted from CHI

- **Bottom navigation bar** with clearly labelled tabs and icons.
- **Event cards** showing title, time slot, location, and event type coded by colour.
- **Event detail view** accessible by tapping a card — with title, time, room, speakers, and description.
- **Exhibitor/speaker list** with search and type filtering.

- **Card-based layout** throughout: light background, subtle shadows, clear typographic hierarchy.

Key differences from CHI (BAC-specific adaptations)

CHI App	BAC 2026 App
Login required (email / SSO)	No login — fully anonymous
Personalised agenda synced to server	Personal schedule stored on-device only
1-on-1 networking & in-app messaging	Not included in v1
Multi-conference switcher	Single congress only
QR check-in for sessions	Out of scope for v1

7. Data Model

All congress data is **bundled directly inside the app** as static **JSON files** (`data/events.json` and `data/exhibitors.json`). On startup the app fetches the latest versions from the public GitHub repository (`ASBTEC/BAC-app` , `master` branch) and caches them in AsyncStorage. If the device is offline, the last cached version (or the bundled version on first launch) is used. There are two core entities: **Event** and **Exhibitor**.

Data update policy: Corrections can be pushed at any time by updating `data/events.json` or `data/exhibitors.json` on GitHub. Users will receive the update automatically on their next app launch without reinstalling.

7.1 Entity: Event

Represents any activity at the congress. All events share the following fields:

Field	Type	Required	Description
id	string	Yes	Unique event identifier
title	string	Yes	Event title
description	string	No	Full event description
category	enum	Yes	Main category: <code>viveBAC</code> , <code>bioBAC</code> , <code>expoBAC</code> , <code>businessBAC</code> , <code>general</code>
activity_type	enum	Yes	Activity type: <code>stand</code> , <code>talk</code> , <code>activity</code> , <code>outdoor_activity</code> , <code>round_table</code>
start_time	datetime (ISO 8601)	Yes	Start time
end_time	datetime (ISO 8601)	Yes	End time
local_location	string	Yes	Room or physical space within the venue (must match a space ID from the Map tab)
location	string (URL)	No	Google Maps URL for the exact location
exhibitor_ids	array of strings	No	IDs of associated exhibitors (speakers, company running a stand, etc.)

category values:

Value	Display label	Description
viveBAC	ViveBAC	Congress experience events: social, cultural, and networking activities
bioBAC	BioBAC	Scientific events: talks, workshops, and academic sessions
expoBAC	ExpoBAC	Exhibition events: sponsor stands and company showcases
businessBAC	BusinessBAC	Professional events: round tables, career sessions, and networking
general	General	Any event that does not fit the above categories

activity_type values:

Value	Display label	Icon
stand	Stand	storefront
talk	Ponencia	mic
round_table	Mesa Redonda	groups
activity	Actividad	extension
outdoor_activity	Al Aire Libre	park

Example JSON:

```
{
  "id": "event_001",
  "title": "Opening Keynote: The Future of Biotechnology",
  "description": "Inaugural keynote of BAC 2026 delivered by...",
  "category": "viveBAC",
  "activity_type": "talk",
  "start_time": "2026-07-07T09:00:00",
  "end_time": "2026-07-07T10:00:00",
  "local_location": "Sala de Graus",
  "location": "https://maps.google.com/?q=...",
  "exhibitor_ids": ["exhibitor_042"]
}
```

7.2 Entity: Exhibitor

Represents a person (speaker) or a company/institution (stand, sponsor) associated with the congress.

Field	Type	Required	Description
id	string	Yes	Unique exhibitor identifier
exhibitor_type	enum	Yes	speaker or business
name	string	Yes	Speaker name or company/institution name
photo	string (URL)	No	Profile photo or logo URL — in practice, photos are bundled as local assets referenced via constants/exhibitorPhotos.ts
description	string	No	Short biography (speaker) or company description
sponsor_tier	enum	No	Sponsorship tier (only for business type): platinum , gold , silver , bronze , or omitted if not a sponsor

sponsor_tier values (applicable to exhibitor_type: business only):

Value	Description
platinum	Highest sponsorship tier
gold	Second tier
silver	Third tier
bronze	Entry-level sponsorship tier

Note on photos: Speaker photos and sponsor logos are bundled as local image assets (PNG/JPEG/SVG) and mapped by exhibitor ID in constants/exhibitorPhotos.ts . The photo field in the JSON is not currently used at runtime; exhibitorPhotos.ts is the authoritative source for visual assets. SVG logos support automatic light/dark variants.

Example JSON:

```
[
  {
    "id": "exhibitor_042",
    "exhibitor_type": "speaker",
    "name": "Dr. Maria Puig",
    "description": "Principal investigator at CRG, specialising in genome editing."
  },
  {
    "id": "exhibitor_101",
    "exhibitor_type": "business",
    "name": "BioTechCorp S.L.",
    "description": "Leading supplier of reagents for molecular biology.",
    "sponsor_tier": "gold"
  }
]
```

8. Shared Component: Event Card

All event lists in the app use the same EventCard component (components/EventCard.tsx). Search, filter, sort, and temporal label widgets are

shown or hidden depending on the tab that renders the component.

Card Content

Each event card displays:

- Full date and time slot (e.g. `Martes 7 julio · 10:00 – 11:00`)
- Event title
- Local location (`local_location`)
- Activity type badge (`activity_type`), colour-coded
- Category badge (`category`)
- Primary exhibitor name (if any)
- "Add to My Schedule" bookmark icon button

Tapping a card opens the **event detail view** (`app/event/[id].tsx`), which includes:

- Status banner: "● En curso ahora" (teal) or "☒ Comienza pronto" (amber)
- Dark navy header with activity type badge, category badge, event title, date/time, and category logo
- Location row — tappable if the `local_location` matches a known map space (deep-links to Map tab); "Abrir en Google Maps" button if `location` URL is set
- Full description
- Associated exhibitor(s): avatar/logo, name, description — tappable, navigates to exhibitor detail
- "Añadir/Eliminar de mi agenda" button

Timetable View

All tabs that list events also offer a **Timetable View** (`components/TimetableView.tsx`) toggled via a segmented list/calendar-grid control. The timetable shows:

- Day selector chips (Martes 7 through Sábado 11 July)
- Hourly time grid from 08:00 to 24:00
- Event blocks colour-coded by category; overlapping events placed in adjacent columns
- Multi-day event banners above the grid
- Real-time current-time indicator (red line with dot), scrolled to on load
- Bookmark icon on each block to toggle My Schedule without opening the detail view

Per-tab Configuration

Tab	Search bar	Category filters	Type filters	Timetable view	Temporal labels
Home	✓	✓	✓	✓	✓ (now / upcoming / past)
My Schedule	✓	✓	✓	✓	✓ (now / upcoming / past)
Map (space panel)	✓	✓	✓	✓	✓ (now / upcoming)
Events	✓	✓	✓	✓	✗

Temporal Labels

Events display visual temporal labels:

- **NOW** — event is currently in progress (`start_time` ≤ current time ≤ `end_time`)
- **UPCOMING** — starts within the next 30 minutes
- **PAST** — already finished (shown with reduced opacity when `dimPast` is enabled)

9. Feature Specifications

9.1 Navigation Structure

The app uses a **bottom navigation bar** with five tabs:

[🏠 Agenda] [🗺️ Mapa] [🏠 Inicio] [📅 Eventos] [👤 Personas]

- The app opens on the **Inicio (Home)** tab by default.
- Navigation is persistent — switching tabs does not reset the scroll position or view state within a tab.
- Icons use **Material Icons** (`@expo/vector-icons`).
- The **three-dot button** (`⋮`) is permanently visible in the top-right corner of every tab's header. The Home tab renders its own custom header (no system navigation bar), so it places the `⋮` button manually in the hero section.

9.2 Global Menu (Three-dot button)

The  button opens a **sliding right-side drawer** (`components/GlobalMenu.tsx`) animated with a spring transition. It contains the following sections:

Apariencia (Appearance)

- Three-button segmented control: **Sistema** (auto) / **Claro** (light) / **Oscuro** (dark).
- Preference is stored via `context/theme-context.tsx` and persisted in AsyncStorage.

Notificaciones (Notifications)

- Toggle to enable or disable local event reminders for events saved to My Schedule.
- Subtitle: *"Recibe recordatorios antes de los eventos que hayas añadido a tu agenda personal."*
- **Lead time selector** (visible only when notifications are enabled): 5 / 10 / 15 / 30 minutes. Default: 5 minutes.
- Notifications are scheduled locally on-device; no internet connection or push service required.

Información (About)

A grouped navigation list with four items:

Item	Route	Content
Acerca de la aplicación	<code>/about</code>	Credits (developer, beta testers), participating organisations (BAC, ASBTEC, FEBIOTEC) with logos and links
Aviso de privacidad	<code>/privacy</code>	Static privacy notice
Licenciamiento	<code>/license</code>	License information
Ayuda y soporte	<code>/support</code>	Contact information for technical support

9.3 Tab: My Schedule (leftmost)

Tab label: Agenda

Icon: bookmark

Purpose: Display all events the user has saved via the bookmark icon, sorted by time proximity.

Behaviour

- **Global empty state** (no saved events at all): shows a centred message —*"Aún no tienes eventos guardados / Explora los eventos y pulsa el marcador para guardarlos aquí."*
- When saved events exist, displays the full filter header (see below) and the event list.
- Saved events sorted by time proximity (in-progress first, then upcoming by start time, then past events).
- Temporal labels (NOW / UPCOMING / PAST) visible. Past events shown with reduced opacity.

Filter Header

- Search bar filtering by event title or exhibitor name.
- Collapsible filter panel (toggle via filter icon button):
- Category chips: BioBAC / BusinessBAC / ExpoBAC / General / ViveBAC (toggle; "all" when none active).
- Activity type chips: Ponencia / Mesa Redonda / Actividad / Al Aire Libre / Stand.
- View toggle: list / timetable.

Storage

- Saved event IDs are stored on-device via AsyncStorage `context/schedule-context.tsx`).
- Not synchronised with any server.

9.4 Tab: Map

Tab label: Mapa

Icon: map

Purpose: Display an interactive map of the congress venue at UAB, with tappable spaces that reveal current and upcoming events.

Map Implementation

- A **PNG floor plan** (`assets/images/map/mapa.png`) rendered as a full-width image, with an invisible **SVG overlay** of tappable `<Rect>` zones aligned to rooms in the image.
- The image/overlay supports **pinch-to-zoom** (scale 0.5×–8×) and **pan** with boundary clamping, using `react-native-gesture-handler` and `react-native-reanimated` .
- The map panel occupies 60% of the screen height; the event panel expands below when a space is selected.

Spaces

The following spaces are defined and tappable on the map:

Space ID	Display label	Type	Colour
Sala de Graus	Sala de Graus	Aula	Light blue
Espacio BusinessBAC (C1)	Espacio BusinessBAC (C1)	Stand	Amber
Sala d'Actes (C0)	Sala d'Actes (C0)	Aula	Light blue
Aula PEP Vendrell (C0/1434.)	Aula PEP Vendrell (C0/1434.)	Aula	Light blue
Pasillo ExpoBAC (C2-C1)	Pasillo ExpoBAC	ExpoBAC corridor	Orange
Catering (C0)	Catering (C0)	Catering	Brown
Espacio BusinessBAC (C2)	Espacio BusinessBAC (C2)	Stand	Amber
Exterior de la facultat de biociències	Exterior de la Facultat de Biociències	Outdoor	Green

The **Exterior** space is a separate tappable button below the building panel (dashed border, green). Tapping it shows all events with `activity_type: outdoor_activity`.

A colour **legend** below the map identifies space types: Aula / Stands / ExpoBAC / Catering / Exterior.

Space-to-event Matching

Events are associated with a space by matching `event.local_location` to the space's `id`. For the Exterior, events with `activity_type === 'outdoor_activity'` are matched regardless of `local_location`.

Event Panel

When a space is tapped, an event panel appears below the map showing current and upcoming events for that space (past events are excluded). The panel includes:

- Space name header
- Search bar, collapsible category/type filter chips, and list/timetable view toggle
- Event cards with NOW/UPCOMING labels
- Empty state: *"No hay eventos actuales ni próximos en este espacio."*

Deep-link Support

The Map tab accepts a `space` URL param (`/(tabs)/map?space=<spaceid>`), used by the Event Detail screen to link directly to the relevant space.

9.5 Tab: Home (centre, default)

Tab label: Inicio

Icon: house

Header: Custom hero header (no system navigation bar on this tab)

Purpose: Serve as the congress home screen with key identification information and real-time event tracking.

Hero Header

The dark navy hero section displays:

- **BAC logo** (left, from `assets/images/logo-in-app.png`)
- **Congress title:** "Congreso Anual de Biotecnología" (in Orbitron / light blue)
- **Congress year:** "BAC Barcelona 2026" (large, Orbitron Black / white)
- **Location:** "Facultad de Biociencias UAB, Barcelona" — tappable, opens Google Maps `https://maps.app.goo.gl/hZKM9e8Mg6i52DPA8`)
- **Date pill:** "7 – 11 de julio de 2026" (amber background) — tappable, opens Google Calendar with congress details pre-filled

The `⋮` menu button is overlaid on the top-right of the hero.

Filter Header (below hero)

- Search bar filtering by event title or exhibitor name.
- Filter toggle button; collapsible filter panel with:
 - Category chips: BioBAC / BusinessBAC / ExpoBAC / General / ViveBAC.
 - Divider line.
 - Activity type chips: Ponencia / Mesa Redonda / Actividad / Al Aire Libre / Stand.
 - View toggle: list / timetable.

Event List

- `SectionList` with three sections: **Eventos en curso** / **Próximos eventos** / **Eventos pasados**.
- Current events sorted by start time; upcoming by start time; past in reverse chronological order.
- Temporal labels visible. Past events shown with reduced opacity.
- Updates automatically every 60 seconds (interval-based).
- Empty state: *"No se han encontrado eventos."*

9.6 Tab: Events

Tab label: Eventos

Icon: event (calendar)

Purpose: Browse the full congress programme with search, category, and type filtering.

Filter Header

- Search bar filtering by event title or exhibitor name.
- Filter toggle button; collapsible filter panel with:
 - Category chips: BioBAC / BusinessBAC / ExpoBAC / General / ViveBAC.
 - Divider line.
 - Activity type chips: Ponencia / Mesa Redonda / Actividad / Al Aire Libre / Stand.
- View toggle: list / timetable.

Event List

- All congress events sorted by `start_time` ascending.
- No temporal labels shown.
- Empty state: *"No hay eventos que coincidan con tu búsqueda."*

9.7 Tab: Sponsors & Speakers (rightmost)

Tab label: Personas

Icon: people

Purpose: List all congress exhibitors — speakers and companies/institutions.

Filter Header

- Search bar filtering by name.
- Type filter chips: **Todos** / **Ponentes** / **Patrocinadores** (mutually exclusive).

Sorting

- Businesses sorted by sponsor tier (Platinum → Gold → Silver → Bronze → untiered), then alphabetically within each tier.
- Speakers sorted alphabetically.
- When showing "Todos", businesses appear before speakers.

Exhibitor Card (`components/ExhibitorCard.tsx`)

Each card shows:

- Profile photo or logo (from bundled assets via `constants/exhibitorPhotos.ts`)
- Name
- Type badge: "Ponente" (teal) or "Patrocinador" (amber)
- Sponsor tier badge (if applicable)
- Short description

Tapping navigates to the **Exhibitor Detail screen** (`app/exhibitor/[id].tsx`), which shows:

- Large hero section (dark navy) with avatar/logo, name, and type badge
- Full description
- List of all events associated with this exhibitor (sorted by start time, no temporal labels)

10. Out of Scope

10.1 User Authentication

No login, registration, or server-side session management. The app is fully anonymous.

10.2 FEBIOTEC Platform Integration

The app does not connect to the FEBIOTEC website backend, user database, or ticket purchasing system.

10.3 In-App Messaging / Networking

No attendee messaging, meeting scheduling, or contact exchange in v1.

10.4 Custom Activity / Quiz Engine

No in-app quiz, voting, or gamification engine.

10.5 Multi-Congress / Multi-Event Support

The app is built exclusively for BAC 2026.

10.6 User Profile

Removed from v1 scope — the app is fully anonymous.

10.7 Native Calendar Integration

Calendar integration is implemented as a **Google Calendar deep link** (pre-filled event URL). Native OS calendar APIs (iOS `EventKit` / Android `CalendarContract`) are not used. This is accepted for v1.

10.8 Sponsor Tier Sub-filter

The Sponsors & Speakers tab does not offer a tier sub-filter (Platinum / Gold / Silver / Bronze). Sponsors are sorted by tier visually but there is no filter chip to show only a specific tier. Considered for a future update.

11. Technical Considerations

Platform

- **Target platforms:** iOS, Android, and Web.
- **Tech stack:** **React Native + Expo** (Expo Router for file-based navigation, EAS for cloud builds).
- **New Architecture:** enabled (`newArchEnabled: true`).
- **React Compiler:** enabled (`reactCompiler: true`).
- **TypeScript strict mode:** on.

Data Layer

- Events and exhibitors are **bundled as static JSON files** (`data/events.json` , `data/exhibitors.json`) inside the app binary.
- On every startup, `context/data-context.tsx` fetches the latest JSON from GitHub (<https://raw.githubusercontent.com/ASBTEC/BAC-app/master/data/>), validates it, caches it in `AsyncStorage`, and replaces the in-memory state. If the network request fails, the cached or bundled version is used.
- **Update policy:** Push a corrected JSON to GitHub. Users receive the update on their next app launch, with no reinstall required.

Local Storage

- **Saved event IDs** (My Schedule): `context/schedule-context.tsx` via `AsyncStorage`.
- **Notification settings** (enabled flag + lead time): `hooks/use-notifications.ts` via `AsyncStorage`.
- **Theme preference** (light / dark / system): `context/theme-context.tsx` via `AsyncStorage`.
- No sensitive data is stored locally.

Push Notifications

- **Local on-device notifications** via `expo-notifications` . No backend or FCM/APNs push service required.
- A notification is scheduled when an event is added to My Schedule and cancelled when it is removed.
- Default lead time: 5 minutes. User-configurable: 5 / 10 / 15 / 30 minutes.
- Requires the user to grant notification permission on their device.

Iconography

- **Material Icons** (`@expo/vector-icons / MaterialIcons`) used throughout (tab icons, UI icons, event detail icons).

App Distribution

- **iOS:** Apple App Store (pending review as of 2026-06-20). EAS submit configured with Apple Team ID `Q664H69PXD` .
- **Android:** Google Play Store. EAS submit configured with service account key.

- **Web:** Expo web build (secondary channel).
- EAS build profiles: `development` (internal), `preview` (APK/internal IPA), `production` (store release with auto-increment versioning).

Routing App Coverage File

- `routing_app_coverage.geojson` is included in the project root for the Apple App Store submission. It is a GeoJSON `MultiPolygon` covering all Spanish territory (mainland, Balearic Islands, Canary Islands, Ceuta, and Melilla).

Design Assets

- Brand assets (colours, typography, logos) are in the `brand_assets` folder and `assets/images/`.
- Colour palette and typography are defined in `constants/theme.ts` (`BACColors` , `Colors` , `OrbitronFonts` , `CategoryColors`).

12. Design Guidelines

Branding

The app follows the **BAC 2026, ASBTEC, and FEBIOTEC visual identity**:

- **Primary dark:** `BACColors.navyDark` (`#102A43`) — used for headers and hero backgrounds.
- **Accent teal:** `BACColors.teal` (`#0D9488`) — active states, primary CTAs, NOW labels.
- **Light blue:** `BACColors.lightBlue` (`#63B3ED`) — supporting text in dark headers, classroom map zones.
- **Amber:** `BACColors.amber` (`#F6AD55`) — date pills, business badges, stand map zones.
- **Typography:** Orbitron (Regular, Bold, Black) for headings and section titles; system font for body text.

Activity Type Colour Coding

Activity Type	Colour
Talk	<code>BACColors.teal</code> (<code>#0D9488</code>)
Round table	Secondary brand colour
Activity	Amber
Outdoor activity	<code>BACColors.green</code>
Stand	Neutral grey

Category Colour Coding (`constants/theme.ts` → `CategoryColors`)

Category	Colour
ViveBAC	Brand accent
BioBAC	Dark blue / navy
ExpoBAC	Purple / violet
BusinessBAC	Teal / green
General	Light grey

UX Principles

- **Two-tap rule:** Any key action reachable within 2 taps from the default screen.
- **Legible:** Minimum 14pt body text; high-contrast text on all backgrounds.
- **Graceful degradation:** Bundled/cached content shown offline; no blocking network errors.
- **Fast launch:** Interactive within 2 seconds on a mid-range device (bundled data, no required network call).

13. Open Questions

#	Question	Owner	Status	Resolution
1	Exact congress dates and number of days?	Organising Committee	✓ Resolved	Tuesday 7 July – Saturday 11 July 2026 (5 days)
2	Exact UAB venue and floor plan of congress spaces?	Organising Committee	✓ Resolved	Faculty of Biosciences, UAB. PNG floor plan in <code>assets/images/map/mapa.png</code>

#	Question	Owner	Status	Resolution
3	Map format: static image with tappable zones vs. interactive SVG?	Tech Lead	✓ Resolved	PNG image with SVG overlay for tap zones + pinch/pan gesture support
4	Which spaces need to be labelled on the map?	Organising Committee	✓ Resolved	See space table in §9.4
5	Backend / CMS for the event and exhibitor JSON files?	Tech Lead	✓ Resolved	No backend. JSON files in GitHub repo, fetched on startup for OTA updates
6	Who manages event data updates during the congress?	Organising Committee	✓ Resolved	Update <code>data/events.json</code> or <code>data/exhibitors.json</code> on GitHub master; users receive changes on next launch
7	App distribution: public stores or internal?	Tech Lead	✓ Resolved	Apple App Store + Google Play Store (primary). Web build (secondary)
8	BAC 2026 brand assets and design guidelines available?	Organising Committee	✓ Resolved	Available in <code>brand_assets/</code> and <code>assets/images/</code>
9	Tech stack preference?	Tech Lead	✓ Resolved	React Native + Expo
10	How far in advance should push notifications fire?	Organising Committee	✓ Resolved	Default: 5 minutes. User-configurable (5 / 10 / 15 / 30 min)
11	Push notification provider?	Tech Lead	✓ Resolved	<code>expo-notifications</code> — local on-device only (no backend / FCM required)
12	Google Maps URL for the congress location at UAB?	Organising Committee	✓ Resolved	https://maps.app.goo.gl/hZKM9e8Mg6i52DPA8
13	Sponsor tier structure and display obligations?	Organising Committee	✓ Resolved	Tiers: Platinum, Gold, Silver, Bronze. Displayed as badge and used for sorting. No tier sub-filter chip (§10.8)
14	Apple App Store routing coverage geographic scope?	Tech Lead	✓ Resolved	All of Spain (mainland + Balearic Islands + Canary Islands + Ceuta + Melilla). See <code>routing_app_coverage.geojson</code>

✓ All open questions resolved.

14. Milestones & Timeline

Milestone	Target Date	Status
PRD finalised and approved	2026-03-27	✓ Done
PNG floor plan of Faculty of Biosciences ready	—	✓ Done (<code>assets/images/map/mapa.png</code>)
Design mockups / brand assets	—	✓ Done
Alpha build — navigation + Home + Events	—	✓ Done
Beta build — all 5 tabs, real event/exhibitor data	—	✓ Done
App Store / Play Store submission	2026-06-20	✓ Submitted — pending Apple review
App live — BAC 2026 opening day	7 July 2026	🕒 Target hard deadline

This document reflects the shipped state of the app as of 2026-06-20. Update it when features change or new scope is agreed.
